Education

Indian Institute of Information Technology, Pune

B.Tech in Computer Science & Engineering

Dec 2022 - May 2026

8.40/10 CGPA

Work Experience

Tarana Wireless

Nov 2025 - Present

SDE Intern

Pune

- Developed **end-to-end test suites** for telemetry microservices using **Python, Playwright, and Pytest**, ensuring reliable execution across simulators and multiple environments.
- Built reusable **testing utilities and frameworks** to streamline development and improve consistency across services.
- Designed and executed **API and unit tests** using Pytest, while debugging service issues through **InfluxDB, Kibana logs, and Kafka topics**.
- Engineered an MCP service to streamline **Jira workflows** (ticket creation, status updates, tracking) and developed tools for **Zephyr integration**; deployed using **Docker on AWS EC2**.
- Applied **test automation** practices within a **microservices architecture**, strengthening end-to-end validation and debugging workflows.

Rizzl

Nov 2025 - Jan 2026

Tech Lead

Remote

- Built and deployed a full-stack product (mobile app, admin panel, and brand portal) using **React Native, Express.js, Prisma, and PostgreSQL**, handling end-to-end development from backend services to user interfaces.
- Implemented **secure authentication flows** including phone OTP and Instagram OAuth with custom validation and basic encryption mechanisms.
- Designed a **payout calculation service** based on user engagement metrics (followers, reach, content performance), optimized with caching for efficient and frequent access.
- Developed backend services for **feeds, transactions, and user workflows**, and managed deployments on **AWS EC2** with PostgreSQL on **RDS**, including CI/CD setup.
- Built admin controls and **cron-based workflows** for automating financial operations (monthly credits, approvals) and managing system configurations.
- Integrated **logging and analytics** to monitor user behavior and system performance, and designed intuitive UI flows for content, brands, and transaction tracking.

Kmesh - CNCF

March 2025 - May 2025

LFX Open Source Mentee & Maintainer

Remote

- Designed and developed a **web-based dashboard** to simplify deployment and management of **Kmesh service mesh** on Kubernetes, improving usability for new users.
- Built backend services in **Go** using the **Gin framework** and **client-go** to interact with cluster resources, including **CRDs** such as Waypoints.
- Developed frontend modules in **React** to visualize **service topology, traffic flows, and logs**, enabling better observability of the service mesh.
- Implemented deployment workflows using **Kubernetes manifests** and packaged the system using **Helm charts** for streamlined deployment as pods within the cluster.
- Migrated the documentation site from **Hugo** to **Docusaurus**, improving structure for docs, blogs, and updates using a modern React-based framework.
- Recognized as a **maintainer** of the CNCF Kmesh repository for consistent contributions and enhancements to developer experience.

Mazinda

Dec 2024 - Jan 2025

Fullstack Developer

Remote

- Developed a **seller application** using **React Native and TypeScript**, covering end-to-end workflows including authentication, onboarding, product listing, and order management.
- Implemented seller onboarding with **phone OTP, document verification, GST details, and commission setup**, enabling seamless integration of new sellers onto the platform.

- Built complete **order lifecycle flows** including order fetching, preparation, status updates, and pickup handling, using a polling mechanism for near real-time updates.
- Designed a **pricing microservice** using **NestJS and MongoDB**, handling dynamic pricing based on delivery location, distance, platform fees, taxes, and discounts, optimized with **geospatial queries and indexing**.
- Deployed backend services on **AWS EC2**, ensuring reliable availability and integration with the seller platform.

ShikshaLokam

June - Aug 2024

C4GT Open Source Mentee

Remote

- Developed a **data migration script** to transfer MongoDB documents from a legacy microservice to a new system, handling **schema transformations** and API-based ingestion.
- Converted database records into **validated API requests (cURL-based)** by transforming them into proper **hierarchical payloads**, ensuring compatibility with updated service contracts.
- Implemented **asynchronous processing** in JavaScript to handle large-scale document migration efficiently, including batching and parallel execution.
- Built utilities for **authentication and request handling**, including token generation, context creation, and secure API interactions; leveraged **Redis caching** to optimize performance.
- Integrated **logging and tracking mechanisms** (including Excel-based reporting) to monitor migration progress and ensure accuracy of transferred data.

Projects

GitFlip | Golang

[Source Code](#)

- Built **gitflip**, a Go-based CLI tool to manage and switch between multiple GitHub identities, handling Git configuration and SSH keys without manual setup.
- Enabled seamless switching of **user.name and user.email** at both global and repository levels, improving multi-account developer workflows.
- Implemented profile management (add, update, switch, remove) with a simple command interface, along with safe handling of **SSH configuration**.
- Packaged and released a **cross-platform CLI binary** with automated builds and easy installation for Linux, macOS, and Windows.

QwikAid | React Native, NestJS, MongoDB, Agentic AI, SocketIO

[Source Code](#) | [YT Link](#)

- Built an Agentic AI chatbot interface for immediate roadside assistance that unified booking, payments, support, ratings, and live mechanic tracking—reducing **navigation time** by **60%**.
- Enabled GPS-based live tracking, offline support, and **emergency SOS**, ensuring reliability in low-connectivity rural areas.
- Implemented **real-time communication** using WebSockets (**Socket.IO**) to connect the AI chatbot with backend services via MCP, enabling seamless request handling and faster user interactions.

Technical Skills

Languages: C++, Go, Python, JS/TS, SQL

Web Technology: Express, NestJS, React.js/NextJS, React Native

Cloud/DB: AWS, MongoDB, Postgres, Docker, Linux

AI/ML: Generative AI, Agentic AI, LangChain, LangGraph

Coursework: Data Structures, DBMS, OS, Software Engineering, OOP

Achievements

- Won the **Academic Team Award** at **DTCC India AI Hackathon 2025** for building an AI tool to help retail investors manage their portfolios.
- Secured **third place among 555 registered teams** at **Software Hackathon 2024** hosted by **UBS** at MKSSS's Cummins College of Engineering, Pune – March 2024.
- Achieved **top 14** ranking out of 64,000+ participants in **Google Solution Challenge India 2025**.
- Achieved **top 25** position out of 2500+ teams in the **ULIP Logistics Hackathon 2.0** conducted by the **DPIIT, NLDS** and **Startup India**.
